

Retro Cartoon UI pack

Use Steps:

1.Set Canvas Size

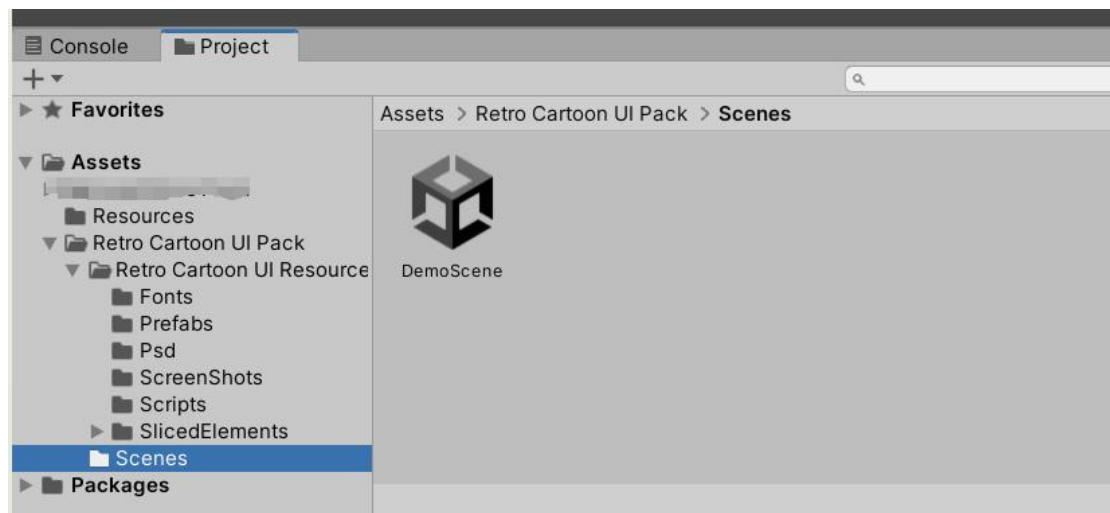

Check whether the canvas resolution is 1920 * 1080. If not, set it to this resolution to display all assets correctly.

2.Select demo scene

Open the following folder:

Project/Assets/Retro Cartoon UI Pack/Scenes/Select "DemoScene" and double-click it to open it.

3.Running Scene Files

Double click the "play" button to start running the scene, so you can see the dynamic effect of the scene.

4. Use prefabs

If you don't want to use the default scene directly, you can find the individual prefab you want to use in 'project / assets /Retro Cartoon UI Pack/prefabs', and then drag it to your project scene. You can freely combine and use all the elements.
